Sequence 1. Application US/08930921B

| Sequence 1. Application US/08930921B
| Patent No. 6287837
| GENERAL INFORMATION:
| APPLICANT: BEAUDOIN, Adrien R.
| APPLICANT: SEVIGNY, Jean
| TITLE OF INVENTION: THEREOF AND PROCESS OF PURIFICATION
| TITLE OF INVENTION: TECHNOLOGY
| TITLE OF INVENTION: TECHNOLOGY
| TITLE OF INVENTION: TECHNOLOGY
| FILE REFERENCE: ATP-DIPHOSPHOHYDROLASES-BEAUDOIN
| CURRENT APPLICATION NUMBER: US/08/930,921B
| CURRENT FILING DATE: 1996-04-10
| RARLIER FILING DATE: 1996-04-10
| NUMBER OF SEQ ID NOS: 8
| SOFTWARE: Patentin Ver. 2.0
| SEQ ID NO 1

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

apyrase (EC 3.6.1.5) precursor - potato

N;Alternate names: adenylpyrophosphatase; ATP-diphosphohydrolase
C;Species: Solamum tuberosum (potato)
C;Date: 10-May-1996 #sequence_revision 19-Jul-1996 #text_change 09-Jul-2004
C;Accession: JC4616; PC4147
R;Handa, M.; Guidotti, G.
Biochem. Blophys. Res. Commun. 218, 916-923, 1996
A;Title: Purification and cloning of a soluble ATP-diphosphohydrolase (Apyrase) from pot
A;Reference number: JC4616; MJID:96188985; PMID:8579614
A;Recession: JC4616
A;Molecule type: mRNA
A;Residues: 1-454 <-HAN>
A;Molecule type: mRNA
A;Residues: 1-454 <-HAN>
A;Molecule type: protein
A;Accession: PC4147
A;Molecule type: protein
A;Accession: PC4147
A;Molecule type: protein
A;Residues: 59-95;96-131;132-160;236-253;332-345 <-HA2>
A;Residues: 29-95;96-131;132-160;236-253;332-345 <-HA2>
A;Residues: Dibers
A;Rocession: tubers
A;Note: The authors translated the codon GCA for residue 215 as Gly
C;Comment: This enzyme belongs to a family of B-type ATPases, and it catalyzes the hydroentyme has nucleotide substrate specificity, divalent cation requirement, and insensiti
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Olved in starch synthesis.

guanosine-diphosphatase (EC 3.6.1.42) - yeast (Saccharomyces cerevisiae)

N;Alternate names: protein YEL042w

N;Alternate names: protein YEL042w

C;Species: Saccharomyces cerevisiae

C;Date: 21-Sep-1993 #sequence revision 18-Nov-1994 #text_change 09-Jul-2004

C;Accession: A40732; B40732; S30837; S50502

R;Abeljon, C.; Yanagiaawa, K.; Mandon, B.C.; Hausler, A.; Moremen, K.; Hirschberg, C.B.; A;Title: Guanosine diphosphatase is required for protein and sphingolipid glycosylation
A;Reference number: A40732; MUID:93308137; PMID:8391537

A;Accession: A40732.

                                                                                                                                                                                                                                                                                                                                                                                                                             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 2

sequence 11328, Application US/09949016

patent No. 681239

patent No. 681239

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;

FILE REPERENCE: CLOOM 1307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT PILING DATE: 2000-04-14

PRIOR FILING DATE: 2000-10-20

PRIOR FLING DATE: 2000-10-20

PRIOR FLING DATE: 2000-10-3

PRIOR FLING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: PSEGSE for Windows Version 4.0

SEQ ID NO 11328

LENGTH: 556
                                                                                                                                                                                                                  440
                                                                                                                                                                                                                                                                                       499
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        119

```
The bovine aorta (AAW04335 to AAW04338 and AAW04340) and porcine pancreatic (AAW04339) ATPDases have been partially sequenced. The sequences have been found to be highly homologous to a human lymphoid cell activation antigen designated CD39 (Maliazenski et at. (1994). J. Immunol.: 3574-3583). The complete sequences of the ATPDases types I and II have not been obtained yet. Assuming that the CD39 gene product is an ATPDase type II, the use of CD39 in the reduction of platelet aggregation and of thrombogenicity may be contemplated, as well as a process of making ATPDases using the CD39 sequence (AAT38516)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Isolated ATP di:phospho:hydrolase enzymes - have anti-haemostatic activity, useful for reducing platelet aggregation and thrombogenicity.
                                                                                                                                                                                                                                                                                                                                           ATP diphosphohydrolase, ATPDase, bovine aorta; pig pancreas, apyrase, CD39; lymphoid cell activation antigen; enzyme; platelet aggregation; thrombogenicity; anti-haemostatic.
                                                                                                                                                                                                                                                                                                                           Human lymphoid cell activation antigen CD39

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                    protein)
inflammatory or immunological stimulation of platelet sing CD39 protein with ATP disphospho:hydrolase activity, enting or alleviating thrombotic condition in mammalian
                                                                                                                                                                                                                        conditions is claimed. In particular the animal is a pig and its cells (or tissues or organs) can be used for transplantation. DNA coding for human CD39 is also useful for genetically modifying a mammalian cell to render it less susceptible to an inflammatory or immunological stimulus and platelet aggregation. The modified cells can be used to prevent or alleviate a thrombotic condition. The present sequence is that of the human CD39 protein and was disclosed in J.Immunol. 153 (8) (1994) 3574-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    61 SLYIYKWPAEKENDTGVVHQVEECRVKGPGISKFVQKVNEIGIYLTDCMERAREVIPRSQ

```

The present 'sequence is the human soluble CD39 protein, a cell surface molecule, having apyrase activity. It is derived from a human B cell line comparations in the present of the molecule, having apyrase activity. It is derived from a human B cell line comparations, referred to as MP-1. Soluble CD39 is constructed by removing the N and C-terminal transmembrane domains. It retains the capacity to metabolise ATP and ADP at relevant concentrations and the ability to block and reverse ADP-induced platelet activation and constrained in including platelet aggregation. Soluble CD39 polypeptides are useful for inhibiting angiogeneesis. It is useful for the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, precelampsia, embolism, platelet-associated ischaemic disorders including lung, coronary and cerebral ischaemia, thrombosis, intracardiac and venous trympheral and cerebral artery thrombosis, intracardiac and venous thrombosis, coagulopathy, deep venous thrombosis (DVF), pulmonary embolism (PE) and transient ischaemic attack. Soluble CD39 is also useful cor preventing thrombus formation or reformation, occlusion, reocclusion, stenosis or restenosis of blood vessels or stroke New soluble CD39 polypeptides having apyrase activity, useful for inhibiting angiogenesis and treating unstable angina, myocardial infarction, stroke, coronary artery disease or injury. Claim la; Fig 1; 122pp; English.

                                                                                                                                                                                                                                                                                     8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is soluble CD39 having apyrase activity. Soluble CD39 retains the capacity of wildtype CD39 to metabolise ATP and ADP at CD39 retains the capacity of wildtype CD39 to metabolise ATP and ADP at CD physiologically relevant concentrations as well as the ability to block and reverse ADP-induced platelet activation and recruitment including CD platelet aggregation. This is used in the treatment of unstable angina, atherosclerosis, peripheral vascular occlusion, preeclampsia, embolism, platelet-associated ischaemia cand cerebral ischaemia, thrombosic disorder including coronary artery thrombosis, cerebral artery thrombosis, intracardiac thrombosis, peripheral artery thrombosis, venous thrombosis, intracardiac thrombosis, coagulopathy, deep venous thrombosis (DVT), pulmonary embolism (PE), transient ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, reocclusion, stenosis or restenosis or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120

The present sequence is the human CD39 polypeptide. The present sequence or its active fragment may be administered to treat or prevent stroke in a subject susceptible to intracranial haemorrhaging or an ischaemic disorder. The CD39 polypeptide inhibits ADP-mediated platelet aggregation ralewcorte accumulation and/or ATP by increasing ADP catabolism to the subject. It is useful for treating or preventing stroke, thrombotic disorders and ischaemic disorders such as peripheral vascular disorder, pulmonary embolus, venous thrombosis, myocardial infarction, transient ischaemic attack, unstable angina, reversible ischaemic neurological deficit and sickle cell anaemia. It is also useful for treating or preventing a stroke disorder in subject undergoing heart surgery, lung surgery, spinal surgery, brain surgery, vascular surgery, abdominal surgery, or organ transplantation surgery
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              and
Treating stroke in a subject susceptible to intracranial hemorrhaging an ischemic disorder, involves administering a CD39 polypeptide which inhibits ADP-mediated platelet aggregation or leukocyte accumulation.
                                                                                                                                                                                                                                                                                                                              Human, CD39, vasotropic, cerebroprotective, haemostatic, thrombolytic,
stroke, thrombotic disorder; ischaemic disorder.

The invention relates to a conjugate (I) comprising an enzyme and a biodegradable polymer, where (i) enzymatic activity of the enzyme is biodegradable polymer, where (i) enzyme in the absence of the biodegradable polymer, or (ii) the half life of the enzyme is longer than that of the enzyme in the absence of the polymer. The enzyme is longer than that of the enzyme in the absence of the polymer. The enzyme is longer than that of the enzyme is longer than that of the enzyme is longer than that of the enzyme is longer than that of the conjugate activity (i) is at least 10 (preferably at least 100) times higher in the presence of the polymer. The enzyme, preferably an apyrase, especially a soluble and/or extracellular enzyme, preferably an apyrase, especially a soluble form of CD39 and catalyzes hydrolysis of nucleoside diphosphate. The conjugate can be used to treat abnormal aggregation of platelets, particularly cardiovascular disease, cancer, sepais or a disease related to graft transplant. (I) is also used for treating coronary artery disease or injury following myocardial infarction, unstable angina, atherosclerosis, pre-eclampsia, embolism, platelet associated ischaemic disorders including lung, coronary and cerebral ischaemia, reocclusion following thrombosis, thrombotic disorders, and thrombosis and coagullopathies associated with exposure to a foreign or injured tissue surface, in combination with angioplasty, cardid endarcerectomy, anastomosis of vascular grafts and chronic cardiovascular devices. The present sequence represents a human CD39
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a method of treating cardiovascular disease in a subject, comprising administering an II-17, II-18, 4-1BB, CD30 or OX40 antagonist. The IL-17, IL-18, 4-1BB, CD30 or OX40 antagonist are useful for treating cardiovascular disorders, e.g. (chronic immune) myocarditis, congestive heart failure, aneurysms, angina, embolism, restenosis, isochaemia or thrombocytopenic purpura present sequence is a polypeptide used in the exemplification of the

                             The invention relates to novel CD39-like polypeptides (CD39-like nucleotide triphosphatase; NTPase) and nucleic acid molecules encoding such polypeptides. CD39-like polymucleotides may be used as hybridisation probes, PCR primers and in chromosome and gene mapping. Polypeptides of the invention may be used as molecular weight markers, as food supplements, in generating an antibody that specifically binds the polypeptide; as anti-thrombotic or anti-tissue graft rejection agents, or configurable and the invention are useful in modulating ecto-ATPase or brain. Sequences of the invention are useful in modulating ecto-ATPase activity and for identifying compounds that modulate ecto-ATPase activity. The present sequence is human CD39 protein, a member of the CD39-like protein family. Note: This sequence is stated to be the same as that shown as SEQ ID NO:13 in the sequence listing of the specification. However this sequence has additional residues at its ends.
                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SLLLQGYHFTADSWEHIHFIGKIQGSDAGWTLGYMLNLTNMIPAEQPLSTPLSHSTYVFL 480

The invention is useful for preventing, treating or ameliorating autoimmune deficiency disorders including connective tissue disease, multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary inflammation, Guillain-Barre syndrome, autoimmune thyroiditis, insulin dependent diabetes mellitus, mysathenia gravis, graft-versus-host disease or autoimmune inflammatory eye disease, allergic disorders including asthma and other respiratory problems, myeloid or lymphoid cell deficiencies, periodontal diseases and other booth repair processes, inflammatory conditions including inflammatory bowel disease and crohn's disease, leukaemias and nervous system disorders. The invention is also useful as an anticoagulant for inhibiting platelet aggregation, food supplement, anti-tissue graft
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated CD39LA polypeptide and polynucleotide, useful for preventing, treating, or ameliorating multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis, myasthenia gravis, or graft-versus-
systemic lupus erythematosus; rheumatoid arthritis; autoimmune pulmonary inflammation; Guillain-Barre syndrome; autoimmune thyroiditis; insulin dependent diabetes mellitus; myasthenia gravis; graft-versust disease; autoimmune inflammatory eye disease; allergic disorder; asthma; respiratory disorder; myeloid or lymphoid cell deficiency; periodontal disease; tooth repair process; inflammatory bowel disease; Crohn's disease; leukaemia; nervous system disorder; anticoagulant; food supplement; anti-tissue graft rejection; ATP neurotransmission; gene therapy; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MEDTKESNVKTFCSKNILAILGFSSIIAVIALLAVGLTONKALPENVKYGIVLDAGSSHT

```

New antibody or its fragment that specifically binds to CD39L3 polypeptide, useful for detecting and purifying CD39L3 polypeptide, for treating leukemia, and for detecting and preventing metastatic spread of

cancerous cells.

The present invention provides novel CD39-like polypeptides (CD39-like nucleotide triphosphatase; NTPase) and their encoding polynucleotides. C nucleotide triphosphatase; NTPase) and their encoding polynucleotides. C rucleotide triphosphatase; NTPase) and teletaed disorders such as acute lymphocytic leukaemia, acute myelocytic leukaemia and orbit of and chronic leukaemia, autoimmune disorders such as multiple sclerosis, c rheumatorid arthritis, Guillain-Barre syndrome, insulin dependent diabetes mellitus, myasthenia gravis and graft-versus-host disease, allergic disorders such as asthma, respiratory disorders, inflammatory disorders cuch as septic shock, systemic inflammatory tesponse syndrome (SIRS) and Crohn's disease, central and peripheral nervous system disorders such as ischaemia, Parkinson's disease, Alzheimer's disease, Huntington's chorea, systemic lupus erythematosus, human immunodeficiency virus-associated myelopathy and transverse myelopathy and nutritional disorders such as vitamin B12 deficiency, folic acid deficiency, Wernick disease, tobaccovitamin B12 deficiency, tolic acid deficiency, wernick disease, tobaccocolor and thrombolytic activity, serve as nutritional supplements and modulates ecto-ATPase activity. The invention acts as a cytostatic and modulates ecto-ATPase activity. The invention acts as a cytostatic agent and is useful in immunototherapy. The present sequence is human CD39 protein Note: This sequence is described in the specification as being the same as the human CD39 protein represented in SEQ ID NO: 13 of the constant and setuation and the constant and sequence are different.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a CD39-like polypeptides and the encoding polynucleotides. The CD314 polynucleotide is useful as hybridisation probes, as primers for PCR, for chromosome or gene mapping, in the recombinant production of protein, and in generation of antisense DNA or RNA. The protein of the invention is used as molecular weight

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
markers, and as food supplements and for modulating ecto-ATPase activity and for identifying compounds that can be utilised for modulating ecto-ATPase activity. The invention is useful for preventing, treating or ameliorating a medical condition, e.g. multiple sclerosis, rheumatoid arthritis, autoimmune thyroiditis, diabetes mellitus, myastheria gravis, autoimmune thyroiditis, diabetes mellitus, myastheria gravis, autoimmune thyroiditis, diabetes mellitus, myastheria gravis, autoimmune thyroiditis, disease, osteoporosis, osteoarthritis, leukaemia or nervous system disorders and in gene therapy. The present sequence is the human CD39 protein. Note: This sequence is stated to be the same as that shown as SEQ ID 13 in sequence listing, however these
